Please find below and/or attached an Office communication concerning this application or proceeding.

1) Notice of References Cited (PTO-892)

2) Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) Information Disclosure Statement(s) (PTO-1449) Paper No(s) 6.

4) Interview Summary (PTO-413) Paper No(s).

5) Notice of Informal Patent Application (PTO-152)

DETAILED ACTION

Page 2

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

2. The disclosure is objected to because of the following informalities: On page 2, lines 30-31, references are made to the claims. The claims are interpreted in light of the specification not vice versa. As such, the specific references to the claims should be corrected.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-4, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Ljungmann, US 6,017,495.

Ljungmann discloses a staining apparatus for staining of tissue specimens placed on microscope slides comprises a number of staining stations (4) and other working stations (1, 2, 3), where the staining stations (4) receive vessels (5) having liquid baths for receiving baskets containing microscope slides with the topical specimens, and a transport mechanism (17-20) having a hoisting device (17) arranged

Art Unit: 1743

to be moved over the vessels (5) and to place baskets in or take these up from the vessels, and to transfer the baskets between the working stations (1-4) in accordance with a programme-controlled staining process.

Ljungmann teaches that in microscopic examination of cell and tissue specimens, it is necessary with a preparation of the specimens in accordance with certain mutually dependent working steps. After fixation and embedment of the specimens, the specimen blocks must be cut. In order to enable an easy microscopic examination, the embedment medium must be removed, and thereafter the specimens are stained.

The staining apparatus shown in FIG. 1 is constructed to be able to carry out all types of routine and special staining processes within the field of histology and cytology. In the illustrated embodiment the apparatus includes 36 working stations, but this number can be increased, for example to 50 stations. The stations may e.g. comprise four to five fetching/unloading stations, four to five waiting/stove stations, four to five water rinsing stations and twenty to thirty staining stations. In FIG. 1, said station typesin the above-mentioned order--is designated by the reference numerals 1, 2, 3 and 4. Each of the staining stations 4 receives a container or vessel 5 having a dyeing bath 6 (see FIG. 2) for the reception of baskets 7 containing microscope slides with the topical tissue specimens. In a corresponding manner vessels 8 for input and output of baskets are arranged at the fetching/unloading stations 1, and on the rinsing stations 3 there are arranged suitable containers or vessels 9 for rinsing water baths.

Art Unit: 1743

As shown, the waiting/stove stations 2 are shaped as an upwardly open casing 14 (melting container for containing a plurality of baskets) having an upper edge for the support of slide baskets 7 in a number of stove positions corresponding to the individual stations. The stations are heated by means of hot air supplied from a fan 15 in combination with a heating element (not shown).

The electronic units, which are based on microprocessor technology, controls the operation of the apparatus in accordance with the topical programme. The apparatus has a memory (EEPROM) in which there may be stored up to 32 different programmes. Up to three different programmes can be in operation simultaneously. The electronic units give the possibility for print-out of staining or dyeing programme and baths conditions. Further, there is a possibility for automatic warning of dyeing bath conditions.

Allowable Subject Matter

- 5. Claims 5-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not teach nor suggest a device comprising a heating station comprising two melting containers arranged next to one another, and the temperature in each of said two melting containers can be adjusted separately by way of said controller, nor a lifting device comprising tow transport rails, arranged parallel to one another, which are each equipped with a transport notch in a region of said plurality

Application/Control Number: 09/780,807

Art Unit: 1743

of reagent containers and with a sawtooth profile in a region of said heating station,

whereby in said region of said plurality of reagent containers with one transport stroke,

and in said region of said heating station said plurality of transport baskets travel a

shorter distance with the same stroke.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure. Ljungmann et al., Edwards et al., Richards et al., Meikle, Bogen

et al. (,963; ,061), Keefe, Tabata, Pedersen, Muck et al., Wilkie et al., Howells et al.,

and Clarke.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Brian R. Gordon whose telephone number is (703) 305-

0399. The examiner can normally be reached on M-F, with 2nd and 4th F off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Jill Warden can be reached on 703-308-4037. The fax phone numbers for

the organization where this application or proceeding is assigned are (703) 872-9310 for

regular communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is (703) 308-

0661.
